

Google Cloud Platform Management

Methods

There are three ways to interact with GCP:

- Cloud Console web interface.
- Cloud SDK/Cloud Shell command line interface.
- REST-based API

Google Cloud SDK

Command line tools:

- gcloud: Main command line tool.
- gsutil: Manage storage.
- bq: Interacting with BigQuery.

Note that gsutil is a separate utility because it also interacts with AWS S3 buckets.

RESTful APIs

APIs need to be enabled before they can be used. Enable through the APIs and Services interface.

- JSON based.
- OAuth 2.0.
- Quotas for daily rates and limits:
 - Soft: can be changed.
 - Hard: fixed quota.
- APIs Explorer can be used to try the APIs using a browser: <https://developers.google.com/apis-explorer/>
- Google Cloud Client Libraries supported for many languages.
