

Google Cloud Architect Notes

This repository contains my notes for studying Google Cloud Platform.

It is incomplete and a mess.

Walk away, nothing to see here.....

PS: When I finish this study I will tidy this repository up in the hope that it will help someone else.

Build PDF

These notes can be built into PDF (or any format for that matter) to make it easier to read and review.

There is a pre-built set of PDF documents in the pdf directory.

How to build on Windows

If you wish to build the documents yourself there is a PowerShell script in the root of the repository called ConvertTo-PDF.

1. Install pandoc if it is not already installed.
2. Install MikTeX if it is not already installed.
3. Clone this repository using git.
4. Open a PowerShell console.
5. Change directory to the root of the repository.
6. Run the PowerShell script by typing `.\ConvertTo-PDF.ps1`.

The script will delete the current **pdf** directory and then recreate it by building the documents from the markdown files.
