# Google Cloud Machine Learning Engine

Google Cloud Machine Learning Engine is a managed service that enables you to easily build machine learning models that work on any type of data, of any size.

## Features

- Fully managed machine learning service.
- Uses open-source TensorFlow to run neural network models.
- Integrates with BigQuery and Cloud Storage.
- Pre-trained machine learning models including vision, speech, and translation.

## When to use?

- Data classification and regression analysis.
- Recommendation systems.
- Anomaly or fraud detection.
- Image analysis.
- Text analysis.
- Sentiment analysis.
